You asked me to remind you today, so here I am. Sheron Antczak, PW Synod Moderator, sent me this email & I am just forwarding it on to you. I told Sheron that I really did think you knew what I was talking about.  
So let me know where we stand on this. You can always call me or email me. Thanks! Star 936-327-5301.

Subject: Quiet Page

Star, I wanted to make sure that I fully understood the ideas behind the quiet page before we went forward with our request to Shane.  
This page would carry all of our current reports and any reports that are made between meetings, until the next meeting. At that time, the reports would be replaced (twice a year for us). The roster would not be carried on this page.  
I asked questions of Judia who has used the Churchwide quiet page and I am copying in the part of the answer that I think is important for you in case you get questions from Shane. If you have any questions, please contact me. Peace, Sheron

. The advantage is that new reports can be added to the site. Example the committee report minutes appear or reports that come in at a later date are posted. I did not think I would use it and find I now go immediately to the quiet page rather than my folder in case I have miss filed or a more updated report has been posted. I also can go to this page no matter what computer I am using or what ever city or country I am currently in. I cannot get to my personal email from my daughter's computer because of her server. Her old server I could. The following information I am not sure of as my server has unlimited storage for as long as I choose to leave it but someone said their computer does not. I know one of the ladies on the Presbytery PWCT uses the public library for her computer service as she does not have a server. My guess is that she might have limited storage but again I am guessing.
